

Project Milestone 2

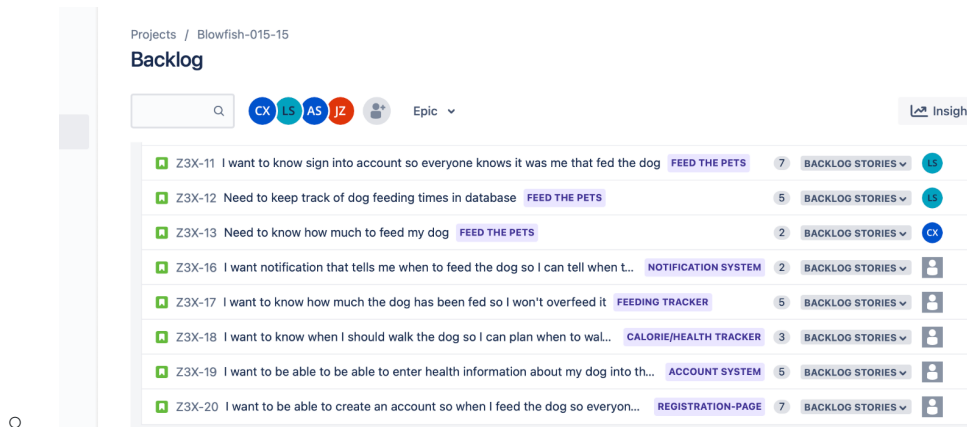

Team Blowfish

- **Project Features list**

- My Fitness Pet Pal: Keeps track of how much pets weight and how many calories your pet must eat and how much they must exercise
- Pet Profiles: Pet profiles that ask for information about pet height, weight, breed etc.
- User Profiles: Keeps track of who feeds the pets using user created profiles.
- Pet reminder capability: Reminds users to feed their pet with an alarm or notification reminder.
- Feeding History: Keeps a history of who fed the pet and at what time and how much in a database

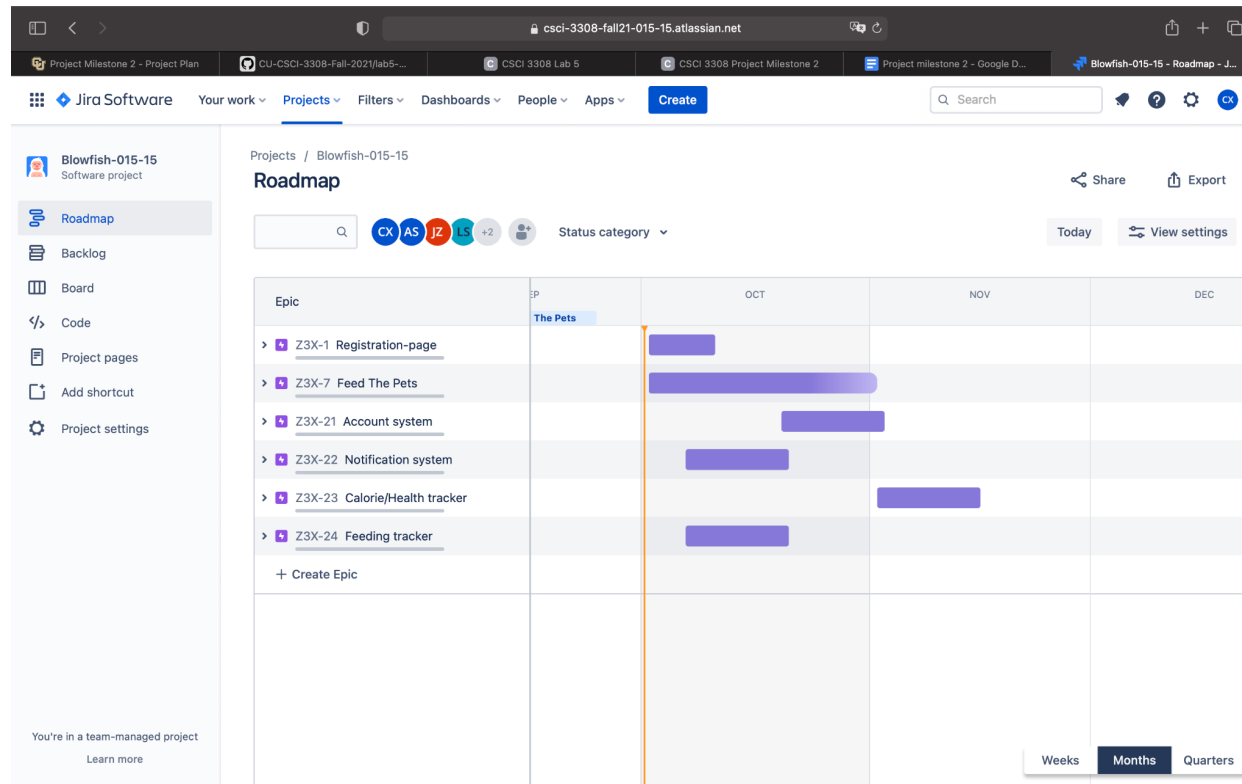

- **Requirements**

- **The ones with most story points are priority**
- <https://csci-3308-fall21-015-15.atlassian.net/jira/software/projects/Z3X/boards/1/backlog>

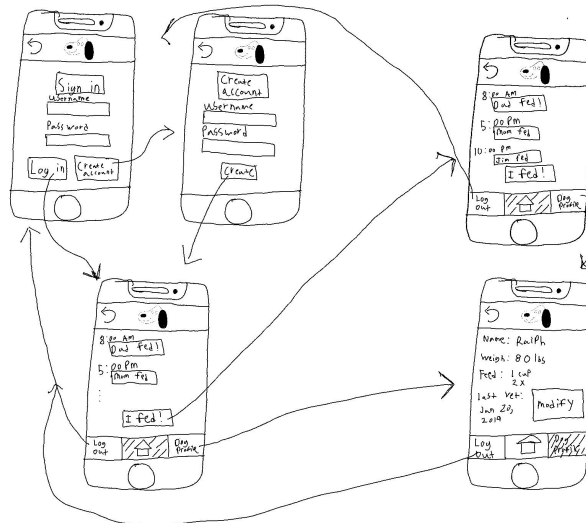

- **Project Plan**

- **Create a Project Plan in your chosen Project Management tool. Maybe a GANTT chart, Kanban board, or other suitable format.**
- **The Project Plan should include each Feature that is to be developed.**
- **The Project Plan should indicate the SEQUENCE of Sprints. That is, the plan should show in what order the features will be developed (designed, coded, tested, integrated.)**
- **The Project Plan should show for each feature WHEN (by calendar date) the feature will be worked on.**
- **The Project Plan should show for each feature WHO will be working on the development of the feature.**
- **The Project Plan should result in a completed, working application that is ready to present by Nov 15, 2021**

• Wireframes & Design

- Create prototypes for the User Interface of your app.
- You are required to follow a consistent design pattern across all the pages of your application.
- For this milestone, you will be creating basic wireframes for at least 3 pages for your application.
- These wireframes can be hand-drawn (or) sketched on a whiteboard (or) drawn in a software. You will be adding pictures of these within your milestone document.
- If applicable, decide and mention which design framework you intend to use for your application. For eg: Bootstrap, Bulma, UIKit etc.

-
- **Individual Contributions**
 - Include a link to the latest commit made by each team member on the GitHub repository. You should have started adding your work to GitHub already. At this point, this does not necessarily have to be code. It could be supplementary work done for the project as well - wireframes, tutorials etc.
 - Ayden:
 - SQL resources: <https://github.com/CU-CSCI-3308-Fall-2021/CSCI-3308-Fall21-015-05/commit/b71a0897c5c4159e1157d95d720fb0ac1074a897>
 - Project Feature List on PDF
 - Leo: <https://github.com/CU-CSCI-3308-Fall-2021/CSCI-3308-Fall21-015-05>
 - Added wireframe to github.
 - Josh: <https://github.com/LeoSipowicz/015-Blowfish/commit/8094d972ea9fec47782a8dfdf58e386a785d9439>
 - Catherine: https://github.com/LeoSipowicz/015-Blowfish/blob/master/introduction_Nodejs
 - Added intro video and tutorial on node.js to github
 - Share a link of the project management board being maintained for this project indicating the status of the tasks at hand.
 - Link to project plan: <https://csci-3308-fall21-015-15.atlassian.net/jira/software/projects/Z3X/boards/1/roadmap>
