

Project Milestone 3

Group 05 - Team Blowfish

Members: Adam, Ayden, Catherine, Josh, Leo

- What features were completed?
 - Project was laid out in the git directory with linked resource html and css folders.
 - Home page was created with linked JS and other pages of the app.
 - Calendar was created to help organize feeding schedule for the pets
 - Functioning front end login page linked to home page and registration page
 - Registration page with input field requirements so users must meet certain requirements before creating an account.
- What worked during the demo?
 - The front end was working
 - Home page and login page displayed correctly
 - Registration page successfully identified if field input met the requirements or not
 - All pages were navigatable with the menu bar.
- What issues were faced either during the development or during the demo?
 - We were confused about how to link the database with the front end and how we were going to implement the back end.
 - We were worried about the short time frame to create the demo and how to work remotely on separate parts of the web app without creating code conflicts.
- What were the suggestions offered by the TA?
 - The TA offered suggestions about the database and to change some of the variables in the database
- Individual contributions by each team member
 - Leo:
 - I worked on making the home page, creating correct directories for resources, html and css and linking our initial html pages together with navigation functionality.
 - Adam:
 - Implemented registration page with required field inputs
 - Catherine:
 - Made an outline of the database in sql
 - Ayden:

- Created Login page with input requirements and linked it to homepages and nav bar
- Created Calendar Page and linked to nav bar
- Josh:
 - Created Architecture diagram for application
 - Some minor error correction on frontend HTML
